SELAH

Volunteer & ProPresenter Guide

How to install Selah, present lyrics, add background and foreground media, and feed transparent lyrics into ProPresenter over NDI or Syphon. Screenshots below are from the real Selah interface.

Version 0.1.0 · For Sunday volunteers and tech teams · macOS Apple Silicon

1. Install from the DMG

1. Open **Selah_0.1.0_aarch64.dmg** from the GitHub Release.
2. Drag **Selah** into **Applications**.
3. Keep **Selah-Volunteer-Guide.pdf** from the same disk image near the booth laptop.
4. First launch may ask to allow an unsigned app: System Settings → Privacy & Security → Open Anyway.

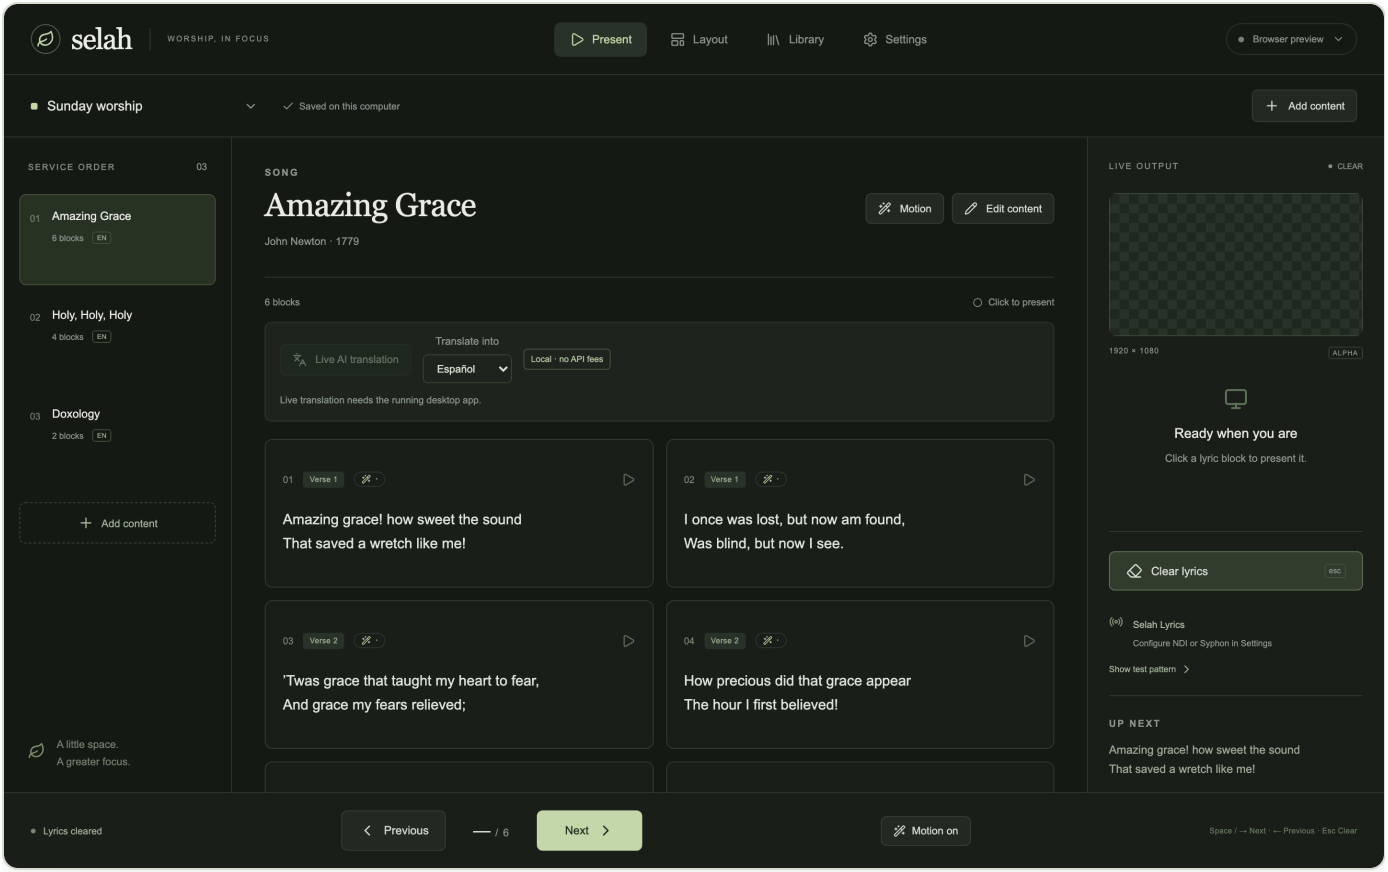

Figure 1. Selah Present view after install — service order, lyric blocks, and live preview.

2. Volunteer quick start — present a song

1. Open Selah. Your last service restores automatically.
2. In **Present**, click a lyric block to put it on air (green “On air”).
3. Press `→` / `Space` for next, `←` for previous, `Esc` to clear.
4. Use **Add content** for songs, paste, OpenLyrics, or Scripture.

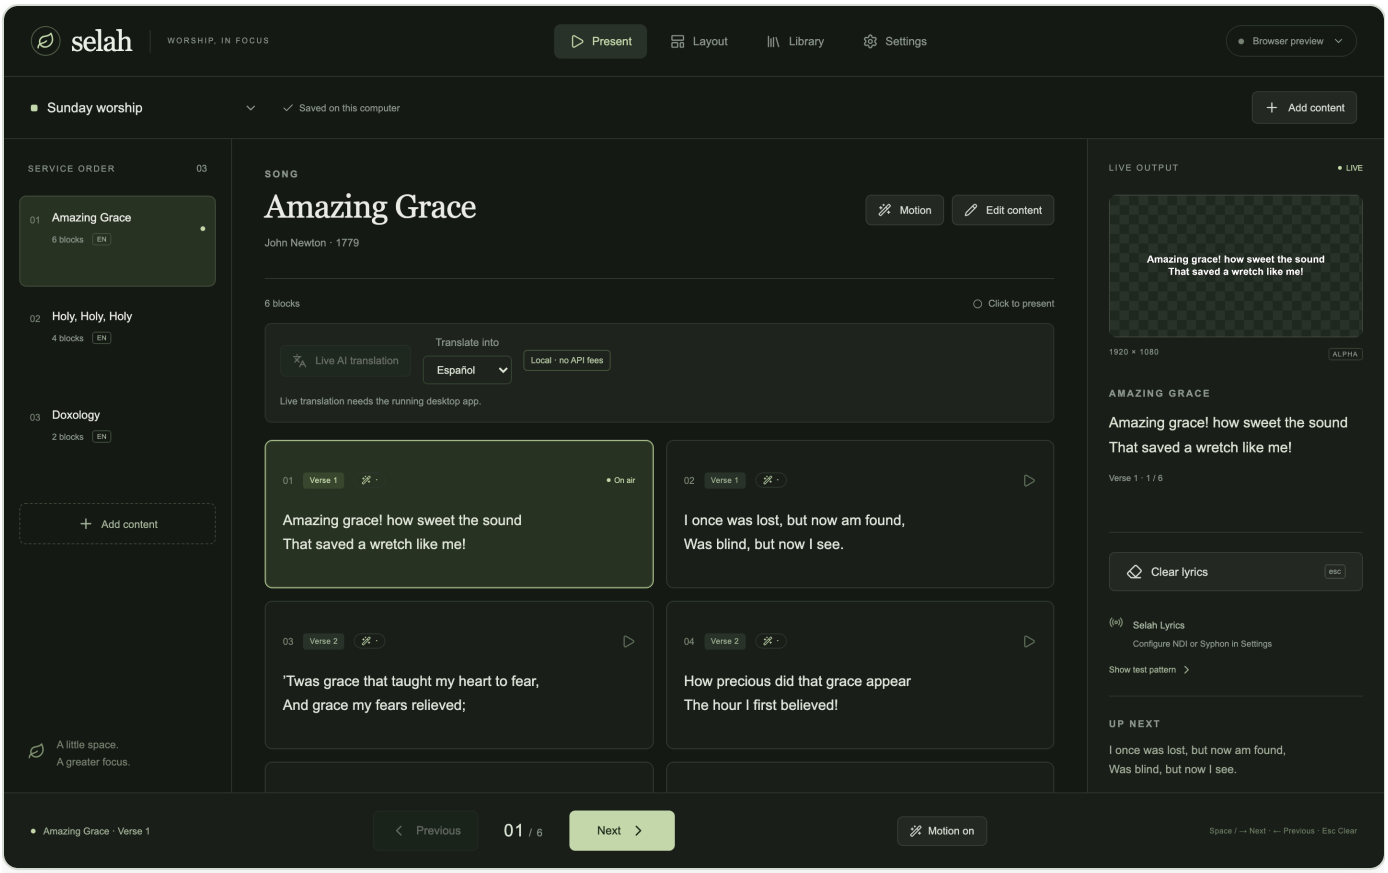

Figure 2. Amazing Grace Verse 1 on air — live alpha preview on the right, Next in the transport bar.

> **Golden rule:** Nothing goes to the congregation until you click a block (or start a test pattern). Browsing the library does not put lyrics on air.

3. Layout — where lyrics sit

1. Open **Layout**.
2. Choose a preset (centered, lower-third, bilingual) or drag regions on the canvas.
3. Click **Apply layout**. Live items keep the previous layout until you present again.

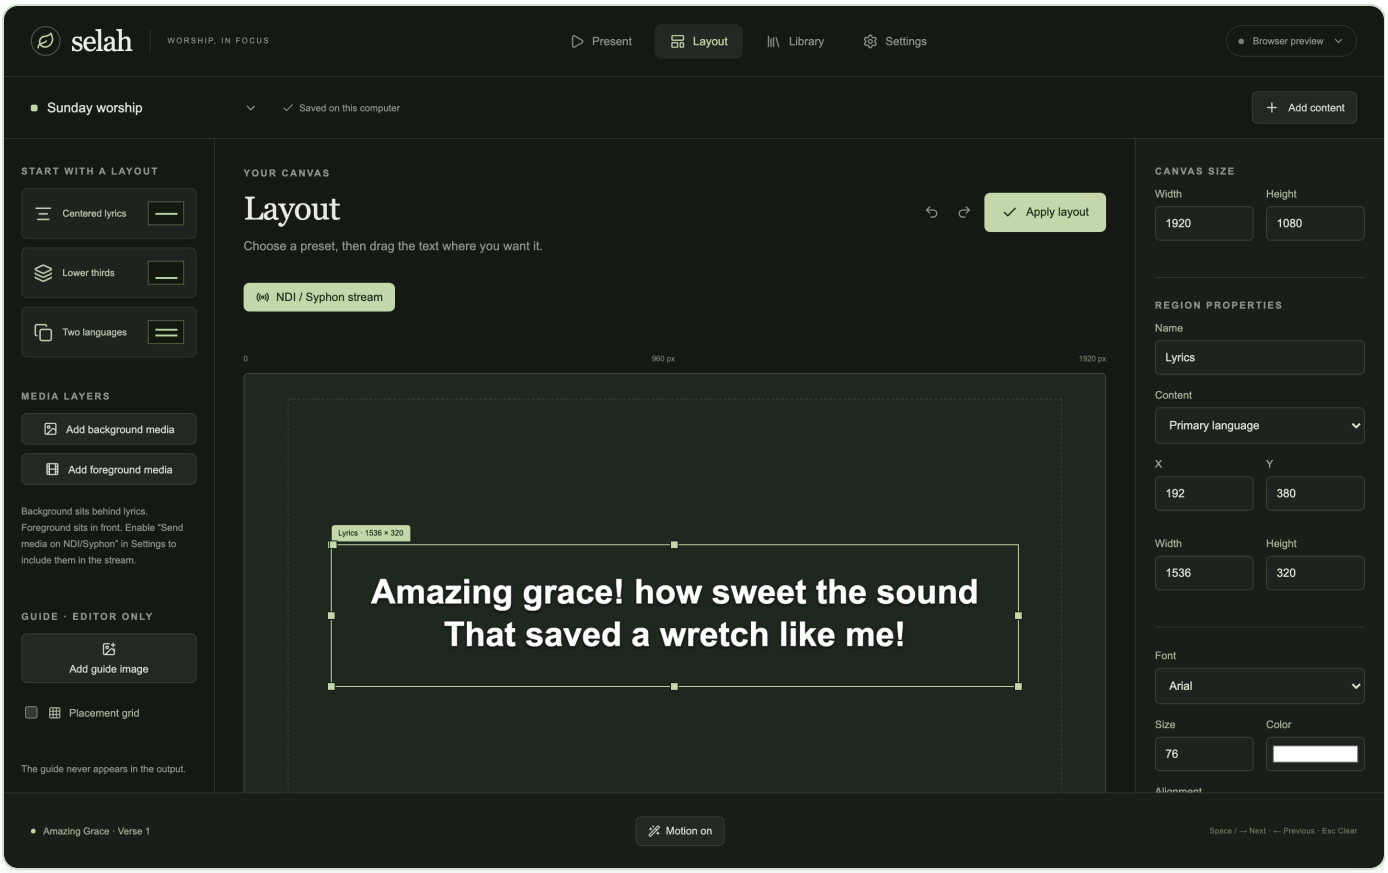

Figure 3. Layout editor — presets, canvas, and region properties for the NDI / Syphon stream.

4. Background & foreground media

Selah can show an image or video *behind* lyrics and another *in front* of lyrics. The physical display always shows this composite. NDI/Syphon only include media when you turn that on in Settings.

1. In **Layout**, use **Add background media** or **Add foreground media**.
2. Pick an image (PNG/JPEG/WebP) or video (MP4/MOV/WebM).
3. Adjust opacity, fit, and for video: mute and audio output device.
4. Apply the layout. Start **Display output** in Settings for a full-screen standalone screen.

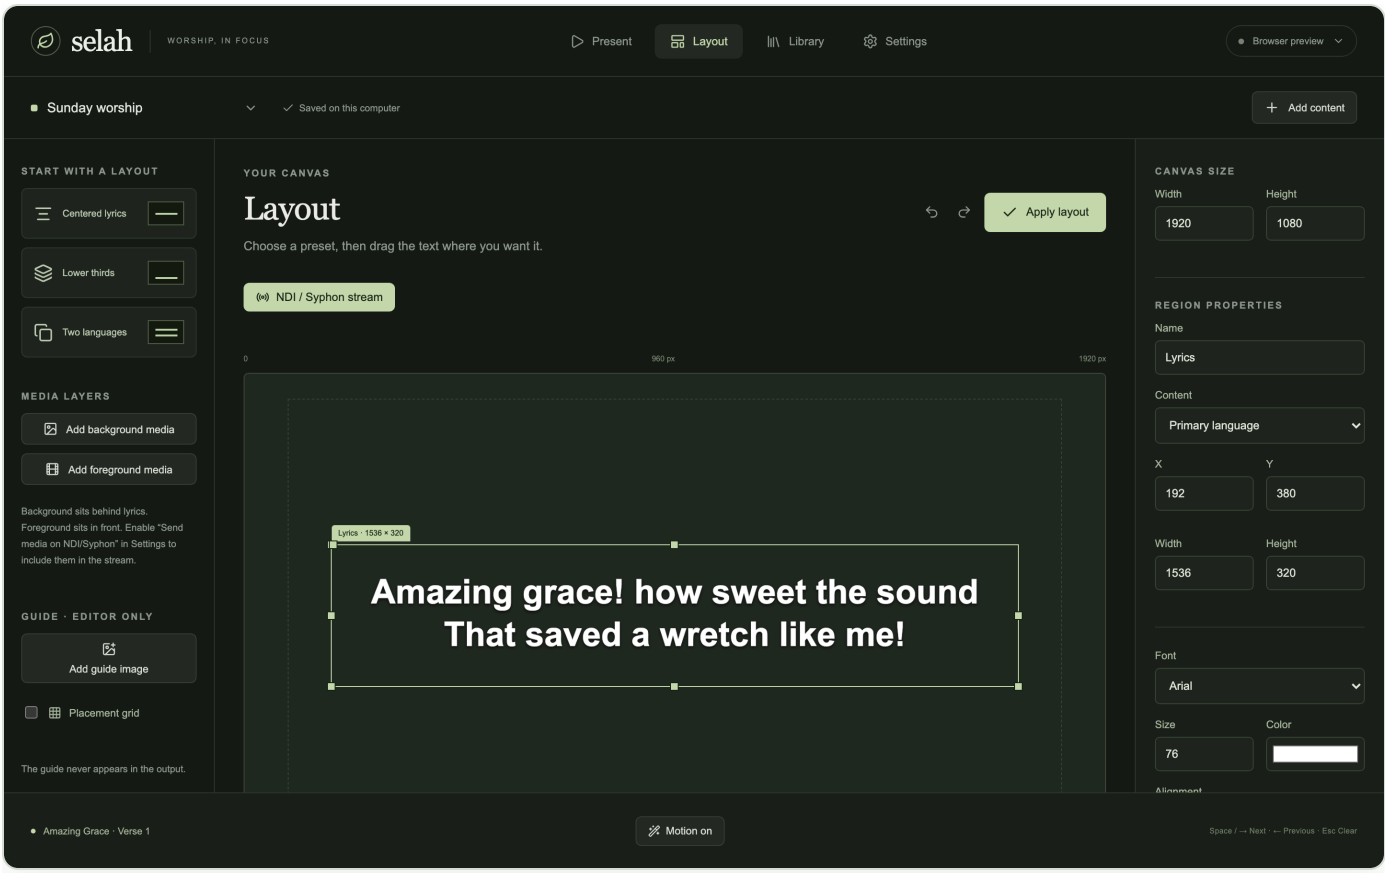

Figure 4. Media Layers in the Layout sidebar — background and foreground controls above the canvas.

5. Library

Open **Library** to browse saved songs and Scripture, search locally, and add items to the service.

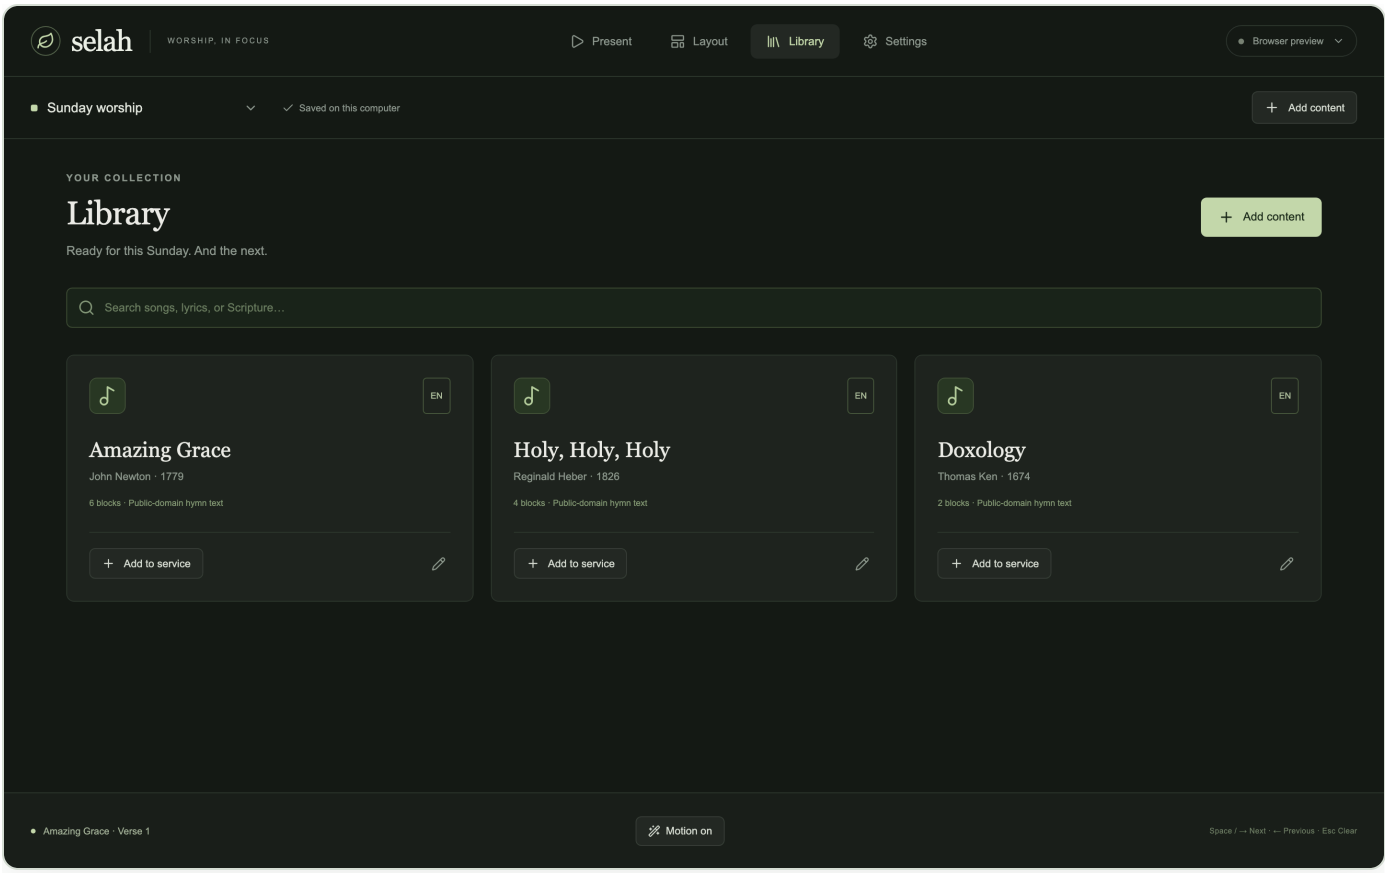

Figure 5. Library — your collection ready for this Sunday.

6. ProPresenter integration (NDI / Syphon)

Selah does not remote-control ProPresenter. It sends a lyric video feed that ProPresenter (or any NDI/Syphon receiver) can use as an input source.

1. Open **Settings → Output**.
2. Leave **Send media on NDI / Syphon** *unchecked* for transparent lyrics (recommended with ProPresenter).
3. Set the feed name (default `Selah Lyrics`).
4. Click **Start** on NDI (network) and/or Syphon (same Mac).
5. In ProPresenter, add an NDI or Syphon input / source and select the Selah feed.

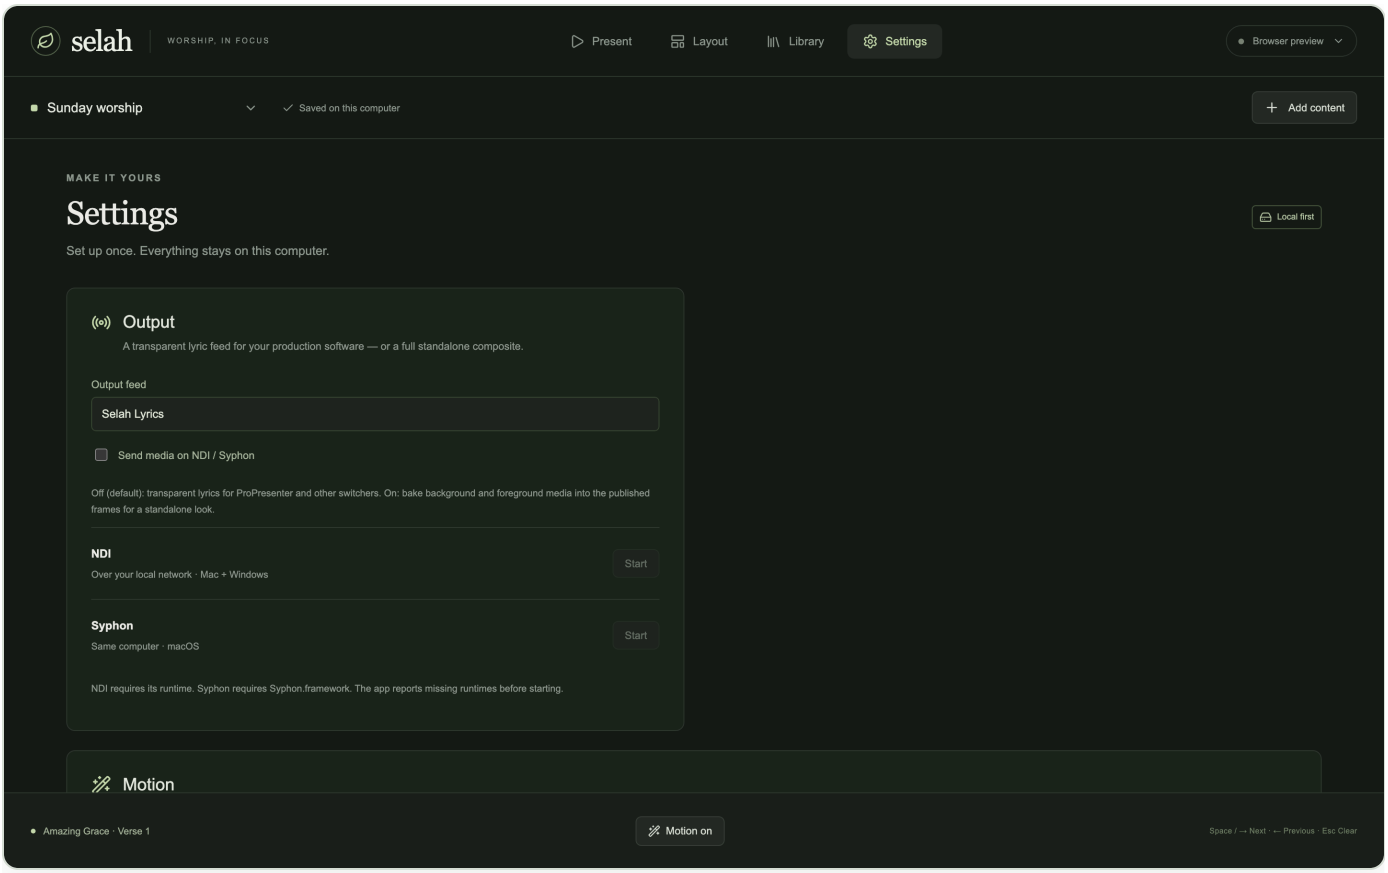

Figure 6. Settings → Output — feed name, Send media toggle, and NDI / Syphon Start buttons.

When to enable "Send media on NDI / Syphon": Use it for a portable standalone output (media + lyrics baked together). Leave it off when ProPresenter or a switcher should supply the background.

`→` `Space` / `←`

Clear
`Esc`

Toggle motion
`T`

Outputs
Settings → Start NDI / Syphon

Standalone screen
Settings → Start display output

Media
Layout → Add background / foreground

ProPresenter
Transparent feed → NDI/Syphon input

8. Troubleshooting

- **NDI missing:** Install the NDI runtime, then restart Selah.
- **Syphon missing:** Install Syphon.framework in `/Library/Frameworks` (macOS only).
- **No lyrics in ProPresenter:** Confirm Selah shows On air, the feed is Started, and the feed name matches.
- **Video has no sound:** Unmute the media layer and pick an audio output device.
- **Unsigned app blocked:** Privacy & Security → Open Anyway.
